IMPORTANT – Register your warranty

Warranty
Please take a few moments to register your warranty at www.pmc-speakers.com (click on ‘register a product’) or complete the warranty card at the back of this booklet. This records the purchase of your subwoofer and provides you, the customer an opportunity to make suggestions and provide feedback directly to PMC.

Product Support
For product support, accessories or servicing advice, please contact a PMC authorised dealer – See www.pmc-speakers.com.
WHAT DRIVES US

At PMC, we believe that music is what really matters; it’s what moves us and gives us the passion for what we do. The company was founded because there wasn’t a loudspeaker that was transparent enough to convey all of music’s expressive power – and we knew we could remedy this.

One of our core beliefs has always been that the same loudspeaker can be used throughout the entire audio chain, from composer to studio or film stage, through post-production and mastering, right to the listener at home. Discerning listeners all over the world agree. Our designs are involved in every link of the music-making chain, from the recording studio to listening at home, which means we know exactly how to present music as transparently as possible, just as the artist intended. This knowledge, combined with our love for music, drives us to create products that you listen through rather than to. We want you to share the thrill of the original recording because there is nothing like the emotional impact of true musical communication.

Loudspeakers are where science meets art; we understand the science so that you can connect with the art.
Congratulations – You have joined the elite

For over twenty-five years PMC has earned an unrivalled reputation for creating the world’s finest professional loudspeakers. Simply put, our speakers provide a reference for the world’s highest profile productions and events. They are found at every stage of the creative process, from conception to recording and broadcast and, of course, in the home.

Our client list reads like a who’s who of the sonically aware, with Elbow, Stevie Wonder, Coldplay, Brian May, Universal, EMI, Sony, Pinewood Studios, Dreamworks, Deutsche Grammophon and the BBC among the makers of movies and music who use our products.

Our loudspeakers were also used in the production of Titanic, Spiderman III, James Bond’s Skyfall and Spectre, Finding Nemo, Pirates of the Caribbean III, and during broadcasts of the Beijing and London Olympics.

General usage guidelines

1. Read these instructions and keep them in a safe place for future reference.

2. Heed all electrical safety warnings, including any on the subwoofer itself.

3. Do not use the subwoofer near water.

4. We have provided a high quality Microfiber cloth for cleaning. This is ideal as the cabinet should only be cleaned with a dry, lint-free, cloth. Do not use solvents, abrasives, waxes or liquids as they may be detrimental to the finish.

5. Floor spikes are sharp and should be treated with great care during installation and use.

6. Do not install near any heat sources such as radiators, ovens, other equipment that produce excessive heat, or in unventilated soffits or enclosures.

7. Unplug this product from both source and power during electrical storms or when unused for extended periods of time.

8. Packing material can pose danger to the young and vulnerable. Ensure these items are kept or disposed of safely.

9. High volume audio signals, however short their duration, have the potential to cause hearing damage. Use care when setting the system volume level to ensure playback sound pressure levels remain within safe comfortable limits.

10. Do not attempt to service the equipment. There are no user serviceable parts inside. Please refer all servicing to PMC authorised personnel.

11. Servicing is required when the apparatus is damaged, exposed to moisture, or exhibits a distinct or sudden change of operation or audio performance.

12. PMC has made efforts to provide accurate installation information and good quality fixings. PMC will not be held responsible or liable for injuries or property damage - direct, indirect or consequential - arising out of use or inability to use this product safely and properly.

13. The twenty5 subwoofer contains very powerful magnets and therefore may have a detrimental effect if left in close proximity to magnetically sensitive items such as: CRT (tube style) televisions or monitors and media such as floppy discs, cassettes and videotapes.
Introduction

Thank you for choosing the PMC twenty5 active subwoofer. This guide provides installation and operating instructions.

This active subwoofers can be used in a 2.1 configuration with twenty5 series speakers to gain extra bass extension and headroom, or they can be used to reproduce a low frequency effects (LFE) channel in a surround system. Numerous configurations are possible, some of which are illustrated in this guide.

The electronics built into the subwoofer cabinet include an ultra-low distortion Class-D power amplifier, with DSP-based gain, filtering, and bass management functions when the signal is routed via the twenty5 sub. Balanced stereo analogue and AES3 digital inputs are accepted to feed the subwoofer system, and these input signals are also passed through to the analogue and digital outputs for connection with other devices. The outputs can be unprocessed or high-pass filtered, and with fixed or variable gain.

The input source, analogue input sensitivity, gain trim, and overall volume are all adjustable, as are the subwoofer’s low-pass filter slope and frequency. Additionally, the phase can be adjusted and a single parametric equaliser is provided to assist with in-room alignment. The analogue and digital outputs can be high-pass filtered, if required, to feed satellite speakers in a 2.1 configuration.

This subwoofer builds upon PMC’s world-class design pedigree, combining the finest drivers available with the unique ATL® (Advanced Transmission Line) bass loading principle, Laminair, sophisticated Class-D amplification, and ultra-precise DSP control. PMC’s unique ATL® technology uses contemporary materials to provide optimised absorption of unwanted low-midrange energy within the cabinet, while extending bass output significantly with negligible harmonic distortion.

The two long-throw g-weave bass drivers employed in the twenty5 subwoofer are a bespoke PMC design delivering an unparalleled transient response. The twenty5 sub cabinet has a small footprint, making it more convenient and easier to place than typical cube-shaped designs.
The source of PMC’s legendary natural and wholly realistic sound is the Advanced Transmission Line (ATL™) bass-loading technology.

ATL™ is an ingenious design which uses energy generated by the bass unit in a much more intelligent and efficient way than speaker designs based on ported or sealed boxes.

In ATL™ loudspeakers, the highly braced cabinet is lined with a multitude of custom-designed acoustic materials that absorb all but the very lowest frequencies. These are guided to exit from a vent on the front-panel, extending the low-frequency response and creating the impression of a far larger speaker with an extra, ultra-high quality bass unit.

ATL™ improves more than just the bass response: because the low end is clean and clear it doesn’t mask the rest of the music. Vocals in particular, are beautifully projected and ultra-vivid.

ATL™ loudspeakers offer another benefit. The ATL™ bass extension does not change with volume level – so even when listening quietly the bass sounds balanced and well defined.
Taking ATL™ to the next level

With the launch of the twenty5 series, loudspeaker audio performance has been taken to the next level with the addition of the Laminair™ aerodynamic vent.

The ATL™ design involves air moving under pressure at high speeds, and PMC’s Head of Design, Oliver Thomas was able to apply aerodynamic principles transferred from his previous industry, Formula 1 to the ATL™ concept.

The result is the unique Laminair™ aerodynamic vent which creates an even smoother, laminar airflow at the exit from the transmission line.

This innovative solution reduces turbulence and drag at the ATL™ vent, reducing resistance, increasing efficiency, eliminating air noise, and provides bass with supreme timing and the ultimate dynamic range.

‘Nothing else comes close to the clarity, timing, and dynamics.’
System description

The **twenty5** active subwoofer has a powerful DSP engine, operating at a fixed sample rate of 96kHz.

The two balanced analogue inputs are conditioned by an adjustable low-noise gain stage prior to A-D conversion to optimise the signal-to-noise ratio. The converter is a very high quality delta-sigma device, producing a 24-bit, 96kHz output. The left and right channels are summed to drive the subwoofer speakers, but passed on as separate signals to the analogue outputs.

The AES3 digital input accepts sample rates up to 192kHz, and is sample rate converted to 96kHz automatically. Either channel, or a sum of both, can be selected to drive the subwoofer, and both are passed on to the digital output.

The DSP engine provides the system volume control, low-pass filtering, parametric equalisation, and phase alignment for the subwoofer, as well as high-pass filtering bass management options for the analogue and digital outputs. It also provides non-invasive excursion limiting to protect the drivers.

The DSP system generates three sets of outputs. In addition to the digital output, there are two separate D-A converters. One converter provides the analogue outputs, while the other feeds a 400W Class-D power amplifier connected to the loudspeaker(s).

The analogue and digital outputs are always available and can be formatted to provide either full range or high-pass filtered signals, which can be used for satellite speakers or other destinations. The output level can be fixed, or follow the system volume control setting.
Unpacking and care

The PMC twenty5 active subwoofer is packed in a heavy-duty protective carton. Please retain the carton to ensure that the loudspeaker can be transported safely if the need arises in the future. If you dispose of the packaging please do so in an environmentally responsible and safe way.

What’s in the Box?

1x twenty5 sub
2x twenty5 sub plinth bars
1x Grille
4x Cork isolators
4x Spike pucks
4x M8 spikes
4x M8 countersunk bolts
1x AC mains power cable
2x RCA - XLR phono adapter
1x Cleaning cloth
1x User Guide

- The twenty5 sub is heavy. Please take care when lifting from the carton.
- Do not attempt to use the loudspeaker if the packaging has been water-damaged.
- Please Note: This unit must be earthed

Care and Service

In normal usage PMC speakers should provide many years of trouble-free operation, but in the unlikely event that you suspect damage or failure has occurred do not attempt to repair the unit yourself. There are no user-serviceable parts inside. Contact your dealer for advice and a service return address.

Clean the cabinets with a dry and lint-free cloth, and avoid the use of solvents as they may damage the finish of the unit.
Installing the resonance absorbing plinth bars

Resonance damping plinth bars and spikes enhance the performance and stability of the twenty5 sub. The bars attach to the base of each speaker using 4 x M8 countersunk bolts. The twenty5 series spikes can be used on sensitive hard flooring with the use of the spike pucks.

1. Carefully invert the subwoofer so that its base is uppermost. Take care not to damage the top of the cabinet when it is upside-down, the use of a soft cloth or square of carpet is suggested.

2. Locate the large M8 bolts and tighten them gently using the allen key supplied until the heads of the bolts are flush with the bars surface. Once the bolts are flush carefully tighten each bolt by half a turn.

   Do not over tighten. Over tightening will reduce the effect of the resonance absorbing material

   The spikes are sharp and should be treated with great care and may damage hard flooring if in direct contact.

   You have the option of using the spike pucks for use on more sensitive flooring.

4. Re-invert the loudspeaker so that the spikes and plinth are at the bottom.

5. Once in position, level the loudspeaker by adjusting each spike in turn.
Connections

Caution
To avoid potential damage, please ensure that the signal source is turned off before connecting or disconnecting your twenty5 active subwoofer.

The rear panel of the twenty5 sub features the following connections:

Audio
2 x Balanced analogue XLR inputs
If you are using an unbalanced Phono/RCA analogue connection, use the Phono/RCA to XLR converters included.

1 x AES3 digital balance input
The balanced connections are wired: pin-1 screen (ground), pin-2 positive, and pin-3 negative.

The input is selected via the rear panel menu system.

Each input has a corresponding output which can provide either the full range signal or a high-pass filtered version, selected via the menu system (see page 18).

Power
IEC (C14) mains socket with power switch. The twenty5 sub accepts AC mains voltages between 90-132 and 180-264V.

In – Thru Connections
These connections serve no function in a domestic/consumer system. These would only be utilised in a specialist professional recording studio environment – Do not use.

THIS UNIT MUST BE EARTHED
Positioning and alignment

With their unique ATL™ cabinet design, ultra-low distortion, and smooth bass roll-off, PMC loudspeakers are more forgiving of difficult room conditions and placement constraints than conventional designs. However, we encourage you to spend some time experimenting in your own room to achieve the very best results, remembering that small changes in location can often influence system performance significantly. The following guidelines are suggestions for a starting point to locate your new subwoofer and optimise its alignment. Fine-tuning can start from there.

Positioning
Since the twenty5 active subwoofer only reproduces frequencies below 150Hz, it doesn’t contribute information towards stereo imaging, and can therefore be placed independently of the main satellite stereo loudspeakers. However, the ideal positioning will be affected by the nature of the room’s standing waves.

A simple way of finding the optimal location for the subwoofer is to place it initially at the listening position. Play music or test signals with wide ranging bass notes and move around the potential subwoofer locations listening for the position which gives the most uniform sound with minimal boomy or weak notes. The subwoofer can then be relocated to the most uniform position. Ideally, this will be close to the front wall and somewhere between the two front speakers.

Alignment/tuning
Once the optimal location has been decided, the subwoofer’s electrical tuning can be performed. The first parameter to adjust is the low-pass filter frequency and roll-off. These should complement the satellite speaker’s low-frequency roll-off.

Next, the Phase can be aligned to ensure that the subwoofer signal through the crossover region arrives at the listening position in-phase with the satellite speakers. A test signal (sine wave tone) can be used at a frequency which will be reproduced by both the satellite speakers and subwoofer – typically around 85Hz. The phase control (and if necessary the polarity inversion) should be adjusted to make the tone as loud as possible, indicating proper alignment.

Finally, the level of the subwoofer can be adjusted to provide a smooth and balanced extension to the low-frequency performance of the satellite speakers. When set correctly you will be almost unaware of the subwoofer’s contribution, noticing its absence when switched off. If you are aware of it in normal use it is probably turned up too loud!
Operational controls

The twenty5 active subwoofer is configured and controlled via a simple menu system which is viewed on the rear panel display and navigated by four associated push-buttons.

Looking at the four cursor buttons, the left and right buttons step back (exit) and select (enter) the menu options, respectively, while the upper and lower buttons scroll through the various menu options and adjust the parameter values. The menu structure is simple, logical and intuitive, and uses clear display legends to indicate the selected function and parameter.

When the twenty5 active subwoofer is connected to a mains supply it will power-up with the default display. Pressing any of the four rear panel buttons will turn the system on. The factory default settings will initially configure the subwoofer to use the analogue XLR inputs, with the input sensitivity set to +12.5dB, Trim 0dB, all the equalisation set flat, backlight timeout 2 minutes, and the volume set to -20.5dB.

Factory Reset
The factory default settings can quickly be restored by pressing and holding the Up and Down buttons simultaneously for more than 2 seconds.

Default Display
With the subwoofer switched on, the LCD window normally indicates the current volume level and the selected low-pass filter frequency and slope. The system volume is indicated in decibels on the upper line of the display, within the range -48.5 to +15dB. To increase or decrease the current volume level press the up/down buttons. The LF roll-off settings are displayed on the second line, with the roll off frequency followed by the slope.

</tr>
</tbody>
</table>

Power Mode
By pressing the right (enter) button, the next menu level is accessed which accesses the power standby mode. By pressing the right button again, power standby is selected and the LCD will show ‘Zzz’ to indicate the standby (Sleep) condition. The backlight will switch off.

| Z | z | z |

NOTE: The subwoofer can be activated again by pressing any rear panel button.
Setup Mode
Pressing the right (enter) button twice from the default volume display accesses the Setup menu, and the up/down buttons can then be used to access the various options.

<table>

After selecting the desired option pressing the right button again displays the current parameter value, and the up/down buttons can be used to alter the value. Pressing the left (exit) button exits the parameter level and allows other options to be selected.

Set Up Menu Options:

- **+10dB Gain**: Introduces +10dB gain to suit Dolby Digital LFE requirements
- **Phase Rev**: Polarity inversion, Off or On
- **Phase**: Phase alignment from 0 to 180 degrees in 5 degree increments
- **Parametric EQ**: Switches single parametric EQ band Off or On
- **PEQ Gain**: Adjusts parametric EQ gain (-8.00dB to +7.87dB)
- **PEQ Frequency**: Adjusts parametric EQ centre frequency (20Hz to 150Hz)
- **PEQ Q**: Adjusts parametric EQ bandwidth (Q=1 to 8)
- **BL Timeout**: Sets the time after which the LCD backlight will switch off. Options: 30 sec, 2 min, 5 min, off (no timeout)
- **Trim**: Input trim level (-8.00dB to +7.87dB)
- **Analogue In Sens**: Input sensitivity (+4dB to +20dB)
- **Source**: Selects input source
  - (Analogue XLR, AES3 Left Channel, AES3 Right Channel, AES3 L+R)
- **LR Out Level**: Fixed or variable
- **LR Out Response**: Filtered or Full Range
- **LF Rolloff Slope**: Off, or 18, 12 or 6dB/Octave
- **LF Rolloff Freq**: Selects the low-pass roll-off turnover frequency. Frequency options: 50, 80, 120, 150, or 200Hz

Integration with satellite speakers

PMC’s twenty5 active subwoofer features DSP-based user-equalisation options. These comprise an adjustable low-pass filter to determine the frequency range over which the subwoofer operates, with an adjustable slope which allows perfect integration with the low-frequency response of the satellite speakers.

The low-pass filter can be switched off, or configured with a slope of 6, 12, or 18dB per octave, and with turnover frequencies of 50, 80, 120, 150, or 200Hz, as illustrated in this diagram.

When using the twenty5 active subwoofer with any other model from the twenty5 series range, we recommend starting with a low-pass filter setting of 80Hz. However, you may adjust this setting as room conditions and personal preferences dictate (see pages 20 & 21 for initial set ups with twenty5 series products).

Advanced room integration using the on board parametric EQ

A single-band parametric equaliser can be used to compensate for single resonances or dips in the room response, assisting with in-room alignment.

The centre frequency of the single-band parametric equaliser (PEQ) is adjustable between 20Hz and 150Hz (in 5Hz increments). The bandwidth is variable between Q=1 to 8 in 0.5 steps (equivalent to bandwidths of 1.4 to 0.2 octaves). The PEQ gain can be adjusted between a boost of up to +7.87 and a cut of up to -8dB.

A separate high-pass filter option is included for bass-management of the output signals which may be passed on to satellite loudspeakers. The high-pass filter turnover frequency and slope mirrors the selected low-pass filter settings.

Example response curves to compensate for room peaks or dips in bass response

An example of a 7.87dB boost at 65Hz with a Q of 1 - wide bandwidth boost at 65Hz
An example of a 7.87dB boost at 65Hz with a Q of 8 (a narrow bandwidth boost at 65Hz)

An example of a -8dB cut at 65Hz with a Q of 1 (a wide bandwidth cut at 65Hz)

An example of a -8dB cut at 65Hz with a Q of 8 (a narrow bandwidth cut at 65Hz)
When loudspeakers are new they will take time to reach their full potential. The characteristics of mechanical devices such as loudspeakers alter and improve their performance significantly after a ‘running in’ period.

The science is simple; as the soft material surrounding the woofer cones is flexed it will eventually reach a point where it has optimum compliancy allowing the drive units to move more freely. This translates to greater accuracy, detail and speed of attack. This short ‘running in’ period takes approximately 50 hours of normal use.
**Specifications**

**Input Connectors**
- Two balanced analogue (left/right) via XLR (female)
- One AES3 digital (left/right or summed channel selectable) via XLR (female)
- Input sample rate: 32 - 192kHz, 24-bit via internal sample rate converter
- All XLR-3F connectors wired Pin-1 screen, Pin-2 hot, Pin-3 cold
- Each input has independent ±8dB trim range

**Outputs**
- Two balanced analogue (left/right) via XLR (male)
- One AES3 digital via XLR (male)
- Outputs can carry direct or high-pass filtered audio, at fixed or variable level.
- All outputs are simultaneously available regardless of selected source.

**LCD**
- 16x2 LCD display and four navigation buttons allow system configuration

**LCD Backlight Timeout**
- 30 seconds, 2 minutes, 5 minutes, or Off

**System Volume**
- -48.5dB to +15dB

**Gain Trim**
- -8.00dB to +7.87dB

**Analogue Input Sensitivity**
- +4dB to +20dB (default = +12.5dB)

**LFE +10dB Gain Mode**
- Off/On

**Source Selection**
- Analogue, AES3 Left Channel, AES3 Right Channel, AES3 Left+Right
  (Subwoofer signal is sum of left and right inputs)

**Subwoofer LPF Roll-off Slope**
- Low-pass filter: Off, 6dB/Oct, 12dB/Oct, or 18dB/Oct

**Subwoofer Roll-off Frequency**
- 50Hz, 80Hz, 120Hz, 150Hz, or 200Hz

**Polarity Invert**
- Off/On

**Phase Alignment**
- 0 to 180 degrees (in 5 degree increments)

- Off/On

**PEQ Gain**
- -8.00dB to +7.87dB

* Specifications subject to change
PEQ Frequency: 20Hz to 150Hz (in 5Hz increments)
PEQ Bandwidth: Q adjustable between 1 and 8 in steps of 0.5

Left/Right Output Levels: Fixed/Variable
Left/Right Output Response: High-pass Filtered/Fullrange

Amplifier Section: 400W / 4 Ohms (driving two 8 Ohm bass drivers)
Mains Power: IEC connector. 90-132 / 180-264V AC 50 / 60Hz Auto-sensing

Usable Frequency Response: 22Hz to 200Hz
Effective ATL Length: 3m (9.8ft)

Drive units: 2 x PMC twenty5 series 6.5”/170mm long-throw g-weave™ cone with cast alloy chassis

Cabinet dimensions: H 587mm (+20mm spikes)
W 200mm (274mm inc plinths)
D 516mm (+9mm grille)

Finish: Diamond Black
Weight: 25kg
Service

We are confident your twenty5 subwoofer will afford many years of trouble-free listening of the highest order. But in the unlikely event that it requires repair, our unique manufacturing procedure, wherein the precise value of each component together with the response of the system as a whole is recorded, will ensure that any replaced parts will exactly match the performance of those originally included within the subwoofer.

For any issues that might arise or for advice and service requirements, the primary point of contact should be your knowledgeable and authorised PMC dealer/distributor.

If you do not have a local representative please see www.pmc-speakers.com and click on ‘where to buy’.

Alternatively you can view our FAQ’s (Frequently Asked Questions) and servicing section on our website.

⚠️ Important Note: Please do not return any products to PMC directly without first contacting our service department.
The twenty5 series currently spans 7 different models, from the 3-way floorstanding twenty5.26 down to the diminutive standmounting twenty5.21. However, every monitor is designed with the same care and attention, using shared families of drive units and crossover designs. As a direct consequence they all enjoy the same family characteristics of wide dispersion, low distortion, consistent voicing, and an even bass response regardless of listening level. This feature allows different sizes of speakers to be used in concert to create effective multichannel systems.
Our meticulous attention to detail

All PMC loudspeakers are hand-built in the U.K. using individual components that are matched to our reference model; this includes the structural integrity of every cabinet and the testing and recording of each component. This guarantees it will be within our strict tolerances and ensures your purchase sounds identical to the original design. Each completed loudspeaker then undergoes a set of objective and subjective measurements - frequency response sweeps ensure that the design meets our exacting performance criteria, and then listening tests are conducted against the reference model using a wide variety of material, from a benchmark BBC speech test to classical music, pop and rock.

“Computers don’t tell the full story. As well as a full frequency analysis, we listen to each speaker we make and run a benchmark BBC speech and music test on every single one.”
Every component that appears in a PMC product is measured, tested, matched and recorded by hand. This analysis also applies to the final product we build to ensure you receive an identical replica of the reference model.

### Inspection checklist

- Enclosure finish
- Assembly & Wiring
- Driver Installation
- Enclosure seal
- Level - Frequency
- Impedance - frequency
- Listening test 1
- Listening test 2
- Final inspection

Servicing and warranty issues – Please read the following carefully.

**Non UK clients**: Contact your local dealer/distributor for the details of warranty repairs - see www.pmc-speakers.com and click on ‘where to buy’ for their details.

**UK clients**: In the unlikely event of a fault occurring with your The Professional Monitor Company Limited (PMC) product firstly contact your dealer where the product was purchased.

Do not return a product to PMC without firstly contacting our technical dept. If the product must be returned for service you will be issued with a ‘Returns Authorisation Number’.

If a product is returned to PMC and subsequently is found to have no fault or a non-warranty fault it will be subject to a minimum of £50.00 plus the carriage for its return.

Proof of purchase is required for any claim covered by this warranty.

This product is warranted for a period of 20 years from the date of purchase or upon receipt of ‘our copy’ overleaf or on-line registration within ten days of purchase or receipt.

The warranty covers defects due to faulty materials or workmanship but does not cover defects arising from accidental damage, misuse or wear and tear. The warranty is void if any attempt has been made by persons not authorised by PMC to dismantle, repair or modify any part of the product.

Products must be returned using original packing material. This warranty does not cover damage in transit.

Note that the cost of the carriage to PMC is not covered by the warranty.

Returned products that are defective that are covered by warranty will be repaired or replaced at the discretion of PMC.

Allow minimum of 14 working days for return of warranty repairs.

This warranty does not effect your consumer rights under statutory law. This warranty is only valid in the United Kingdom.
Please complete and return this section - or simply complete the on-line registration at www.pmc-speakers.com and click on register product.
