upgrade kit

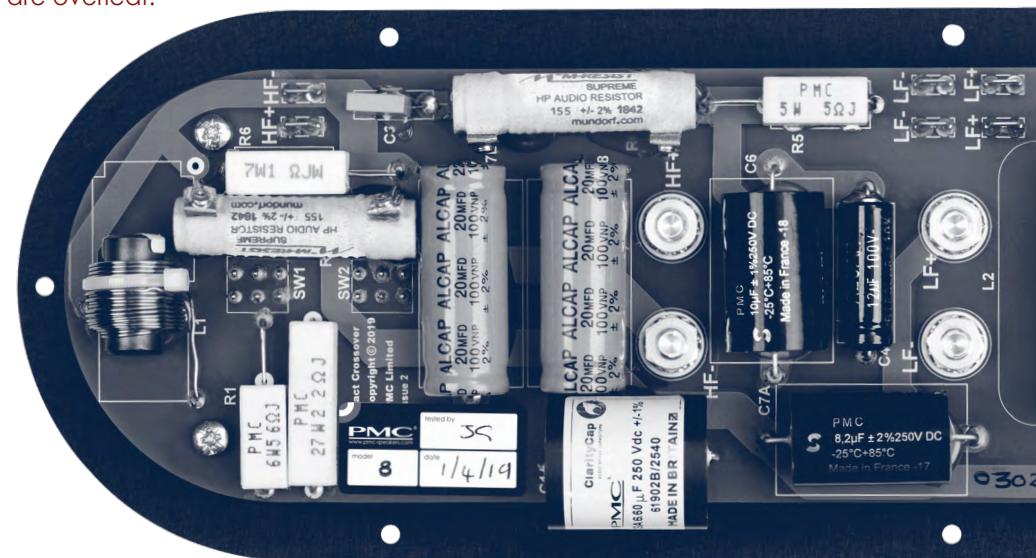

OUR SONIC SIGNATURE

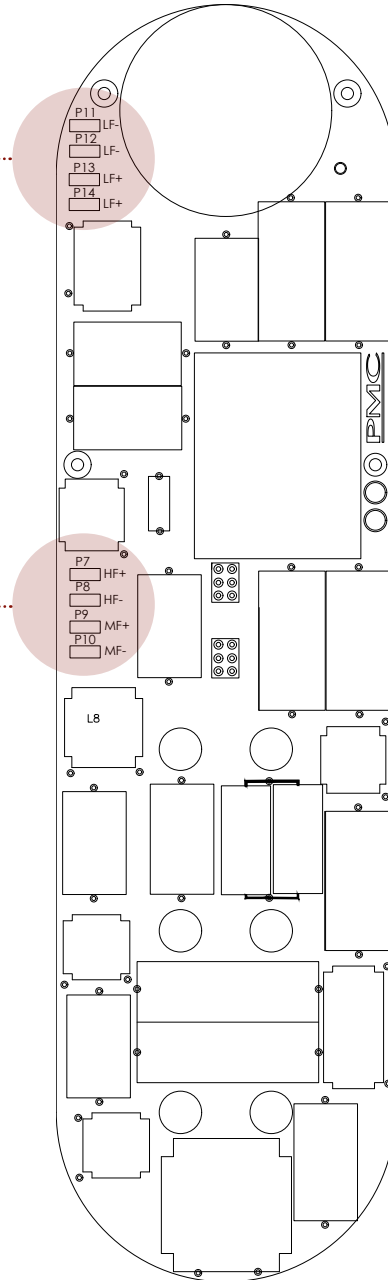

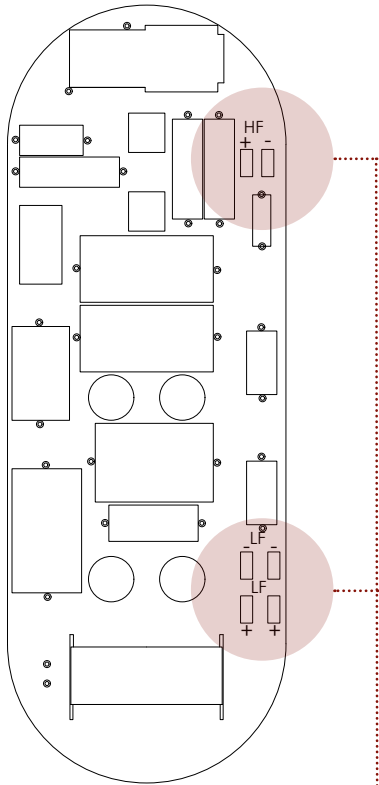

These precision crossovers will upgrade your fact loudspeakers to our latest Signature specification. To develop the Signature range we have applied the same hand-selected components employed in our flagship fact fenestria to the original fact models, delivering breath-taking new levels of musicality and transparency. To ensure utmost accuracy, the crossovers in this upgrade kit have been checked, measured, and verified to match our reference crossover held here at PMC.

PRECISION DIVISION

The crossover is an essential component of any quality loudspeaker, dividing the incoming audio from an amplifier into multiple signals with specific frequency ranges best suited to reproduction by each of the loudspeaker's drive units. Both fact Signature models feature sophisticated crossovers with accurate filters mounted on military-grade fibreglass boards, ensuring that only the ideal frequency range is precisely routed to the correct driver. Thick, pure copper tracks connect the crossover components to optimise signal delivery and the positioning of each component has been carefully considered to minimise unwanted interference. Utilising the finest components selected following extensive listening tests, they deliver the Signature PMC sound – accurate, engaging, and effortless.

The installation instructions are overleaf.

IMPORTANT
These are the connector positions. Read the fitting instructions before disconnecting the wires.

FITTING INSTRUCTIONS

IMPORTANT! Read these instructions before disconnecting cables

- Using the included 2.5mm hex key, remove the screws around the outer edge of the back panel and extract the crossover assembly from the speaker.
 - Take care to note the marking on each wire and the connector position that it is attached to on the existing crossover. We recommend taking a photo of each wire position before disconnecting the cables.
 - Disconnect one wire only and transfer from the original crossover to the corresponding connector on the new Signature crossover. Repeat for the remaining wires.
 - Ensure that each wire is fitted to the same connector that it was removed from.
- Check that all connections are secure.
- Fit the Signature crossover assembly to the speaker by tightening the screws around the outer edge of the back panel. We have provided a spare set of screws in case any are misplaced.
- If you would like your original fact crossovers to be recycled, please fit them in to the presentation box and return to your dealer.

WARRANTY INFORMATION
Your new **Signature crossover** comes with a 5-year warranty. The original warranty on your speakers remains unchanged.
