PMC active twenty5.22i

Monday, December 2, 2024
Jason Kennedy

2024 was the year that PMC brought active operation to its twenty5i loudspeaker range, or the two-ways within it at least. The active twenty5.22i is the larger standmount offering and powers each of its drivers with a 100W amplifier for maximum control and huge dynamic potential. This is an extremely capable loudspeaker that can deliver lifelike energy and phenomenal timing and imaging, it may look pricey for its size but you will have great trouble finding an amp and speaker combination to come close to the performance on offer.
